

Figure 6. Therapy-related AML (t-AML; ICD-O3 9920) and MDS (t-MDS; ICD-O3 9987). SEER has been coding t-MDS as t-AML since 2010. To reverse this SEERaBomb uses linear fits to t-AML numbers before 2010 to determine how many to relabel as t-MDS after 2010. The result is exact t-AML (9920) linearity, and excess t-MDS (9987) noise, after 2010.
